

# Sleep Testing to Go

## *Tamper-Proof Positive Identification*

- ★ Any night
- ★ Any place

**Only WatchPAT offers**  
***Chain of Custody testing***

## Trucker Testing for Sleep Apnea: On-the-go

**Tamper-proof Trucker Testing:** Trucker testing for Obstructive Sleep Apnea is being legislated to improve road safety. Testing in traditional sleep labs is not only expensive and cumbersome but impractical for truckers never staying in one place. WatchPAT is the only device offering truckers the ability to administer the sleep test whenever convenient to *them* – on the road or on-the-go. Incorporating a patented tamper-proof, digital bracelet, WatchPAT gives 100% positive patient identification assuring trucker safety administrators a clear positive Chain of Custody for verifying the test results. Also used for airline pilot, police, & occupational health testing.

**Importance to Trucking Concerns:** WatchPAT is the ideal device to effortlessly and non-intrusively enable safety administrators to monitor and improve health and safety outcomes on the road without sacrificing valuable work time. Even today, when mandatory testing is not yet legislated, it is invaluable in litigation cases relating to fatigue-related accidents (*Can you afford not to?*)

**The Company:** Itamar Medical Ltd. is a publicly-held medical device company utilizing PAT™ (Peripheral Arterial Tone) signal technology and applications. The PAT signal is a non-invasive “window” to both the cardiovascular and autonomic nervous systems.

**Medically acclaimed:** WatchPAT is formally recognized nationally by CMS-Medicare and has the CPT Category 1 code from the AMA. It is also reimbursed by 78% of the US private health insurance payers. It is the only ambulatory device for home testing of obstructive sleep apnea that is also authorized for reporting sleep states as well. WatchPAT was recently awarded the accolade of **Top 10 Medical Innovation for 2010** by the Cleveland Clinic. Kaiser Permanente of Northern California relies solely on WatchPAT to perform more than 25,000 sleep tests per year, being more economically viable than sleep labs.
